Success learning: learning from successful examples

INVESTMENT / ECONOMY / BUSINESS

Make success a learning resource

Analyze successful examples and extract factors that can be reproduced. This is not a strictly standardized academic term.

Five practical steps

Select a case → break down actions, decisions and environment → choose reproducible elements → put them into practice → verify and revise.

Applications to investing and side businesses

Analyze investors’ decision criteria and risk management. Break down customer acquisition, sales and cost structures in side businesses.

Pitfalls

Do not underestimate luck or historical context. Beware of survivorship bias and compare with failures too.
